ENGLISH

SCLEROTIA GROW KIT READY-TO-GROW USER MANUAL

EN The jar contains 0,7 liters of spawn that gradually forms sclerotia. Put the jar in a clean, dust free environment. Do not cover the air filter on the lid.

HARVESTING

The production date is printed on the lid. Three to four months* after this date the Mexicana grow kit can be harvested. Tampanensis and Galindoi will be ready for harvest approximately five months* after this date. Do not open the jar before harvesting. Harvest all sclerotia at once.

* Depending on the temperature

TIPS

- The optimal temperature is 20-24°C.
- Avoid higher temperatures and large temperature fluctuations.
- Do not keep the jar above a radiator or in the full sun.

READY FOR HARVEST
